Handbook of Orthodontics

By Cobourne, DiBiase

Elsevier, February 2010
Paperback 424pp h234mm x w155mm Approx. 350 illustrations (200 in full color)
ISBN 9780723434504
1.500 Kč

Richly illustrated and in full colour throughout, the new "Handbook of Orthodontics" presents the subject of orthodontics in an accessible, easy-to-read manner. Whilst maintaining a strong clinical focus throughout, this new volume provides the reader with a firm understanding of the problem of malocclusion and its management and addresses the controversies in modern orthodontics by taking an evidence-based look at current clinical practice. The book also presents a clear explanation of the basic sciences of relevance to the orthodontist, including an up-to-date look at craniofacial development, growth and syndromic conditions that affect this region. "A Handbook of Orthodontics" is therefore an excellent introduction to the subject of orthodontics and is particularly suitable for final year dental undergraduates, postgraduate students, general dental practitioners with an interest in the field and orthodontic therapists.

Oral Complications of Cancer and its Management

By Andrew Davies, Joel Epstein

Oxford University Press, March 2010
Hardback 336pp h246mm x w171mm
ISBN 9780199543588
1.750 Kč

Oral problems are common in cancer patients. They can be a part of the disease itself; they can develop as a result of treatment; they can accompany other symptoms and present as a comorbidity; and they can even first present after the original disease itself has been cured. Oral symptoms can be complex to treat, both preventing administration of potentially life-saving treatment, and also directly causing additional life-threatening complications. However, many symptoms can be treated, and lead to tremendous relief of suffering for the patient. Oral complications of cancer and its management is the first book to focus on this unique set of symptoms, and provides an international, multi-professional reference with up to date, evidence-based, clinically relevant advice. It covers topics such as oral anatomy and physiology, oral assessment and oral hygiene, as well as more common oral complications of cancer and its treatment. Surgical, radiotherapy and chemotherapy side effects are detailed in all of the chapters whilst specific problems are discussed in detail in separate chapters. Other chapters focus on oral infections, and major oral symptoms experienced by patients with cancer.

In addition there are chapters addressing the needs of specific groups of patient (e.g. paediatric patients, patients with advanced cancer), and the health economic impact of oral complications. This book should become the complete reference source for the wide multi-disciplinary team involved in treating the cancer patient with oral problems; this includes oncologists (both medical and clinical), oncology

nurses, oral medicine specialists, palliative care physicians and nurses, special care dentists, special care dental nurses/hygienists, and therapy radiographers.
