"Diagnostic Immunohistochemistry" presents the latest information and most reliable guidance on immunohistological diagnoses in surgical pathology. David J. Dabbs, MD and other leading experts bring you state-of-the-art coverage on genomic and theranostic applications, molecular anatomic pathology, immunocytology, Non-Hodgkin's lymphoma, and more. Additional features such as tables discussing antibody specifications, differential diagnosis boxes, ancillary anatomic molecular diagnostics, and full-color histological images ensure user-friendly coverage that makes key information easy to find and apply. The fully searchable text is also available online at expertconsult.com, along with a downloadable image bank and access to Path Consult. This concise and complete resource is today's indispensable guide to the effective use of immunohistochemical diagnosis.

Modern Soft Tissue Pathology

By Markku Miettinen

Cambridge University Press, July 2010

Hardback 1116pp h279mm x w215mm 279g 100 b/w illus. 74 tables

ISBN 9780521874090

5.250 Kč

This book comprehensively covers modern soft tissue pathology and includes both tumors and non-neoplastic entities. Soft tissues make up a large bulk of the human body, and they are susceptible to a wide range of diseases. Many soft-tissue tumors are biologically very aggressive, and the chance of them metastasizing to vital organs is quite high. In recent years, the outlook for soft-tissue cancers has brightened dramatically due to the increased accuracy of the pathologist's tools. All methods of diagnosis are covered here, with an emphasis on the newest immunoassays and other genetic, molecular, and immunologic diagnostic modalities. This book's systematic description of benign and malignant primary soft tissue tumors with didactic, comprehensive panels of illustrations allows the reader to formulate a complete understanding of the morphology of tumor entities at one glance. The book covers both the most common tumor entities and more unusual diseases using more than 1,500 color images, making it a resource for beginning and senior pathologists.
